

BIBLIOGRAPHY OF POWER DISTRIBUTION SYSTEM PLANNING

A paper prepared by Turen Gonen, University of Missouri-Rolla, and Aly A. Mahmoud, Iowa State University, for the System Planning Subcommittee, Power Systems Engineering Committee. H. W. Colborn, Chairman

Abstract - This paper presents a bibliography of selected references pertaining to electrical power distribution system planning. The references selected are typical and therefore are representative of studies dealing with power distribution system planning.

INTRODUCTION

An extensive, but not necessarily complete, search has been made for the identification of papers, reports, and other references published in the open literature which describe the power distribution planning methods and techniques. Emphasis is placed on references which illustrate practical as well as theoretical applications of distribution system planning techniques.

The listing of the titles is subdivided into three sections, depending upon the general substance of each article. However, a title may be listed in more than one section if the paper covers material in various sections. The entries in each section are listed in alphabetical order. The last name of the first order author determines the alphabetical position. Many of the articles are available in abstract form in Science Abstracts, Section B, of the Engineering Index, and digesting or indexing periodicals, as well as in the original journals listed. Only the more readily available foreign publications are included.

CLASSIFICATION OF LISTINGS

1. Analyses
2. Models
3. Techniques

1. ANALYSES

1. Anderson, A. S. and V. A. Thieman, "Distribution Secondary Conductor Economics," AIEE Trans. PAS, Vol. PAS-78, 1959, pp. 1839-43.
